1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Terao et al. in view of Davis et al.

Terao et al. in shows a shock absorber having a pneumatic actuator with a magnetic force actuator to fine tune the position of the piston. Note the magnet 82 that is used in combination with a sensor positioned on an outer circumferential surface of the cylinder tube 42 for detecting a positional error of the piston 20.

The claimed invention differs from Terao et al. only in the type of magnet actuator and the type of sensor.

Davis teaches the use of a linear magnetic actuator and pressure sensors for controlling an isolator.

It would have been obvious to one of ordinary skill in the art to have utilized a linear motor and pressure sensors in Terao et al in view of the teaching of Davis et al. as a mere substitute of known equivalents dependent on the associated environment or intended use of the actuator.

Also, the use for positioning payload is considered as a mere matter of intended use.

Re- claim 12, note gas tank 12 in Terao et al.

Re- claim 3, Davis shows the liner motor.

Re-claim 4, uniaxial fails to connote any specific structure.

3. Claims 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yamaoka shows a shock absorber.
